

**Duplo UI Application**

Duplo is a UI Application that uses the UI Components & REST APIs as building blocks to build Web Pages .

It also have use the Workflow tools to determine the flow based on data/outcome or incase of failure in service or component rendering etc.

**Core/CRUDAPI Layer**

The Core/CRUD Layer exposes the basic read/write operation as REST APIs

**RepositoryLayer**

The Repository Layer are the interfaces to persistence data. We are using Mongo Repository.

**Data Layer**

The Data Layer is the actual data in form of document store.
